Dear Relai Team,

As a seasoned software engineer with over a decade of experience – including several years building mobile apps with React Native – I’m excited to apply for the **Senior React Native Developer** position at Relai. Your mission to make Bitcoin simple and accessible deeply resonates with me, and I’d be honored to contribute to your fast-growing team.

During my time at *Compasso UOL*, I led the development of cross-platform mobile applications using **React Native**, **TypeScript**, and **RESTful APIs**, delivering seamless user experiences for large-scale clients. I’m proficient with **Redux** for state management and I like to follow the **MVVM (Model-View-ViewModel) pattern** to ensure clean separation of concerns and maintainable codebases. My engineering mindset values clean code, performance, and maintainability, and I bring this into every project I touch.

Currently, I’m pursuing a **PhD in Informatics at the University of Lugano (USI)**, where my research focuses on dependable distributed systems. This academic rigor complements my industry experience, especially when working on robust, scalable architectures. I also developed *wondersofswitzerland.com*, a personal hobby project built with Next.js, showing my passion for creating polished digital experiences from scratch.

Beyond my technical skills, I thrive in remote-first teams, communicate clearly, and love mentoring fellow developers – values I see reflected in Relai’s culture. The idea of building tools that help individuals and businesses save in Bitcoin is not only technically exciting but personally meaningful.

Thank you for considering my application. I would love to discuss how I can help shape the next generation of Relai’s mobile app. I’m looking forward to hearing from you.

Warm regards,

**Eliã Rafael de Lima Batista**
